

BABY LOCK SEWING ACCESSORIES

3 Spool Specialty Thread Tower

(BL-ATT)

The Baby Lock 3-Spool Accessory Thread Tower was designed to enhance the experience of sewing with specialty and metallic threads. The 3-spool tower helps to eliminate tangling, twisting, and breakage when using these threads by lessening tension as the thread feeds through a machine.

This tower also makes it easier to use double and triple needles. And, it can be used to pre-load up to 3 color changes when embroidering. The tower easily attaches to the horizontal bobbin winder spool pin.

INSTRUCTIONS:

1. To install the thread tower, slide the tower onto the bobbin winder spool pin. Push firmly so the thread tower is slid all the way to the back of the spool pin.

Note: On most models, the tower will rest flush against the machine's carrying handle. However, the tower will not set flush against the handle on the Baby Lock Ellisimo, but will have the same performance quality as on other models.

2. Place thread spools on to any of the three spool pins. Make sure the spool can freely turn on the spool pin.

Note: Always leave a small gap between the spool and the spool cap to allow the spool to turn freely on the spindle.

3. When threading the machine from the tower, make sure the thread is coming off the bottom of the spool. Use one of the provided spool caps, or one provided with your machine to secure the thread spool in place.

Note: When using the automatic needle threading feature on a machine, pull a little slack in the thread so the machine can easily thread the needle.
